

Assignment No.2

Shishir S. Badave

Question taken from

https://github.com/gadepall/ncert/blob/main/linalg/vectors/gvv_ncert_vectors.pdf– Q.no.2.24

1 QUESTION No.2.24

Find a unit vector in the direction of $\begin{pmatrix} 1 \\ 1 \\ -2 \end{pmatrix}$

2 SOLUTION

To find the unit vector in the same direction as a vector, we divide it by its magnitude.

$$\vec{a} = 2i + 3j + k$$

putting the values of vector given in the problem

$$|\vec{a}| = 2^2 + 3^2 + 1^2$$

$$|\vec{a}| = 14$$

The modulus of the same can be calculated as

$$|\vec{a}| = \sqrt{1^2 + 1^2 + 2^2}$$

$$= \sqrt{1 + 1 + 4}$$

$$= \sqrt{6}$$

$$= 2.44$$

a =

$$\frac{\vec{a}}{|\vec{a}|}$$

Putting the values

a =

$$\frac{i + j - 2k}{2.44}$$

=

$$\frac{1}{2.44}i + \frac{1}{2.44}j - \frac{2}{2.44}k$$

a = 0

Resulting zero vector is

$$\vec{0} = 0i + 0j + 0k$$

Thus the unit vector in the direction of $\begin{pmatrix} 1 \\ 1 \\ -2 \end{pmatrix}$ is

$$\frac{1}{2.44}i + \frac{1}{2.44}j - \frac{2}{2.44}k$$

The points were plotted on graph, Following graph is obtained with the help of python
